# About Us

## OUR HISTORY

BRIJU is a Polish company that was established in 1920 by Jan Piotrowski. Thanks to his passion, persistence and talent, it is still managed by four brothers – the grandsons of the founder. Traditional jewellery technology that has been passed by BRIJU from one generation to the next since 1920 is visible in every detail of the handmade jewellery. BRIJU is a brand that combines history with modern times. It means tradition reflected in the present and a symbol of everlasting beauty, which defines the unique feminine power by adapting to different preferences and tastes. Manufacturing precision and original proprietary designs transform every product into a timeless treasure.

Briju brand, despite its relatively short presence in the retail market, has a rich and long tradition and experience in the production and wholesale trade. Our trade offer includes the highest quality jewellery made of gold and silver, as well as collections with diamonds and other precious stones, a wide range of customised wedding rings and watches of many well-known brands including our own brand.

Briju presents original collections and the latest jewellery hits, following the latest trends. Our products are shipped to most countries in Europe and beyond it. For the last few years, Briju has been an active participant in Europe's largest jewellery fair in Vicenza Oro.

The brand follows current trends and creates products of the highest quality precious metal alloys, taking care of the details and combining its long tradition with new technologies. Designers and jewellers working with BRIJU developed a recognizable style appreciated by many consumers.

Our products are created with passion. We improve our skills by taking every new challenge. To be put on shelves, the new product has to undergo more than 20 manufacturing stages first! The most complicated works during the production of jewellery include gemstone riveting and casting. These technologies constitute the specific know-how of the company. The whole manufacturing process, from design to finished product, takes approximately 3 weeks. For us, the most important manufacturing process is designing new models. Without an appropriate idea we would not be able to move on to the next stages.

Being open to inspiration, we create unique designs characteristic for BRIJU to satisfy the most exquisite tastes of our Customers. Each new model starts its life as a design. All ideas are put on paper and analysed by a wide group. The most promising ones are visualised with use of 3D visualisation software. At this stage, details are refined and free flow of ideas between designers and goldsmiths allows us to combine art with technology.
