

The family company Andreas Daub

Tradition & Innovation – for over 150 years

MANUFAKTUR SEIT 1872

History – Jewellery since 1872

- In 1872, the young goldsmith Andreas Daub founded his company, which still bears his name today.
- Legendary watch chains, Art Nouveau collections and the production of the first doublé jewellery in Germany shaped the first decades of the company's history.
- The company's greatest asset continues to be its well-trained and long-standing employees, who contribute their expertise with passion.
- The fact that the Andreas Daub manufactory always concentrates on its own strengths also contributes to its success, and these are the reasons why the name Andreas Daub stands for high-quality and diverse jewellery.
- With over 90 employees, Kurt Daub is now the 5th generation to run the company.

Core Expertise

- Own DAUB jewellery collection with low minimum order quantities.
- Many years of experience as an OEM (Original Equipment Manufacturer) producer for well-known brands.
- Specialising in the processing of precious metal tubes, sheets and wires.

Responsibility

At Andreas Daub, we feel a special responsibility for our employees and our environment. We regard product and service quality as a central pillar for the production of handcrafted jewellery 100% Made in Germany. Our relentless efforts to offer our customers the best possible service is one of the foundations of our company policy. As a certified member of the RJC (Responsible Jewellery Council), we are also committed to conducting our business in accordance with the RJC Code of Practice and integrating ethical, human rights, social and environmental considerations into our daily operations, business planning activities and decision-making processes.

Responsibility for people & environment

In addition to our memberships with "Made in Germany" and "RJC", we integrate the topics of sustainability and environmental protection into our daily work. We are constantly rethinking and revising processes in order to produce as resource-efficiently as possible.

We would like to briefly present a few examples:

By commissioning a new compressor, we can now save approx. 4,500 kw/h per year, which corresponds to approx. 1.9 tonnes of Co².

We attach great importance to the correct disposal and separation of waste. Precious metal waste is handed over to certified refineries for recovery and retention in the raw material cycle.

Our company grounds are maintained in a natural way so that we can preserve the diversity of animal and insect species.

Further information on this topic can be found [here](#) on our website.
